MOVIESTORM

Moviestorm Education is a suite of movie-making tools and assets for teachers and students, that promotes engaging and collaborative learning

A fast, fun and low cost film-making solution for media courses, Moviestorm Education is also a flexible cross-curriculum tool that is ideal for energising subjects and students in a medium that resonates with the YouTube Generation.

PC & MAC

Moviestorm Education also comes with the optional Moviestorm Schools - a version with content specifically designed to be suitable for ages 13 and under.

As a result Moviestorm is being used by teachers and students within most educational sectors and institutions, across most subjects, throughout the world.

Moviestorm provides the full range of movie production tools; set design, character creation, direction, cameras & editing.

Features

- Explorative game-style interface
- Massive library of characters, props and animations
- Everything is fully customizable
- Import and export flexibility
- Highly supportive film making community

* Requires internet connection for license authentication   *** Pricing for annual licenses only*

What people are saying about us

"Some of my students are now working their lunch breaks because they're so inspired!"

Steve Thorne
Long Road Sixth Form College, Cambridge

"With the increasing emphasis of students being media literate and being prepared for today's knowledge economy it is essential that students of all ages engage with industry standard tools to be able to understand and create resources of the highest quality. This is where Moviestorm really stands head and shoulders above the competition".

Adrian Hall
former Programme Director Personalised Content, DFES

"I created a video where a character was presenting the topic in front of relevant images and played that to the classroom. I could just as easily have done that in real life but somehow being on film meant that the content engaged the kids completely in a way that a simple classroom presentation couldn't have done"

John West
Faringdon College

"I have found that the students are motivated not only by the movie lessons themselves but how the animations are made"

Paul Carr
English Teacher, Japan

"This provides students with a great opportunity to write, direct and create films they couldn't normally do on a student budget. My class includes cinematographers, editors, writers, and video producers. They're learning about their own role in film production, but they're also learning to see the bigger picture and understand what everyone else does."

James Martin
University of North Texas

"It's one of those pieces of software where you go yeah, yeah, yeah, then when you've used it, you wonder how you ever lived without it."

Tara
Full Sail University
